# Virtual Private Servers

VPS are the perfect solution for advanced websites, apps and programs looking for increased flexibility, power and control, without the cost of a dedicated server. Our Virtual Servers are ideal for web designers, developers, small businesses and agencies demanding cutting edge VPS technology at a great price.

- Full root access
- Host multiple websites
- Advanced monitoring tools
- Dell & Intel hardware
- Out of band SSH access
- Free online control panel

## UK VPS hosting Features

All our VPS use the latest Dell and Intel hardware for maximum performance and uptime and come with full root access as standard for maximum control and flexibility.

Plesk 10 Control panel	✓
99.99% SLA	✓
Full root access	✓
Red Hat KVM	✓
Out of band SSH access	✓

As well as fantastic technical specifications, our UK VPS come with these great features:

### No over crowding

We never over crowd a server or over sell any resources, which means you get exactly what you have paid for, and no less. No matter what is being run on the server, our virtualisation technology makes sure the 'private' in 'virtual private server' means something.

### Online control panel

Take control of your VPS with remote switch off/ restart, uptime monitoring, bandwidth charts, server status, and more. Add Plesk or cPanel to your VPS for even more flexibility and functionality.

### **Multiple websites**

Host multiple websites with your own virtual server, and using cPanel or Plesk allocate resources on a website by website basis.

### **Dell and Intel inside**

All our virtual private servers are genuine Dell Servers built specifically for virtualisation. This ensures you get the best possible performance from your VPS all day, every day.

### **More than web hosting**

Use your VPS for more than hosting your website files, or to complement existing resources. A virtual private server is a great choice as a gaming, database, file, video, FTP, mail, anything you can think of server.
